

Navigating Digitalisation: The challenges for non-profits

Challenge based learning challenge as part of Innovation and Entrepreneurship course at Università di Trento

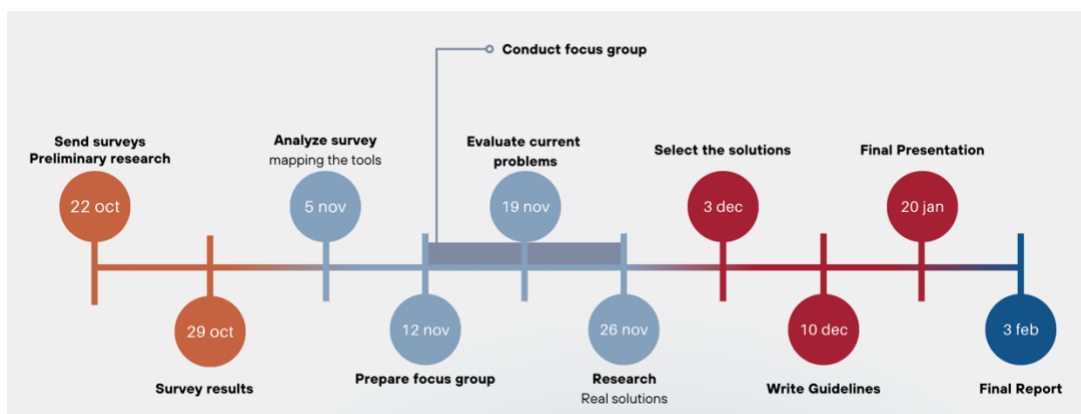

Context

The Centro per la Cooperazione Internazionale (CCI) is a non-profit hub that promotes democratic international relations and global solidarity by combining research, journalism, training and community engagement.

Problem

CCI significant challenges in sustainable and effective digital transformation. The limited financial resources, technical expertise and a clear vision of internal processes hinders operational optimization and broadening impact.

Approach

1. **Defined the challenge**

CCI's digital transformation hindered by limited resources, skills, and unclear processes.

2. **Research**

Desk research on social/tech innovation in nonprofits to map barriers (skills gaps, risk aversion) and opportunities (cloud, social media).

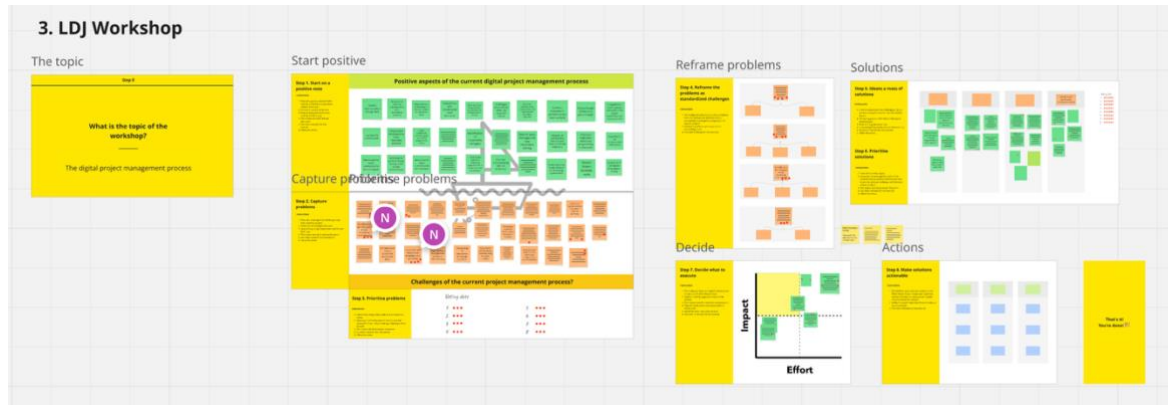

Co-designed an *exploratory survey* with the director to map CCI's tools and processes.

Deployed the survey to 35 staff (~65% response) and analyzed results

(heavy reliance on Google services; issues with access and privacy).

3. **Focus group**

Convened a *focus group* of seven strategic staff using the *Lightning Decision Jam* method to deepen findings and co-create solutions.

4. **Analysis**

Identified priority pain points in digital project management: delays accessing the management system, fragmented info on Google Drive and lack of standardized templates.

5. **Solution**

Synthesized insights with the challenge provider and *developed a prioritized action plan* (solutions ranked by effort vs. impact) to guide management system improvements and proposed next steps.
