

Interaction Lab Docu Wiki

What is it The Interaction Lab provides documentation for equipment (software and hardware) available for borrowing. Previously, this documentation was hosted on GitHub, which posed challenges for usability and file discoverability. To address this, the documentation team initiated the development of a custom website featuring a user-friendly back-end file management system. After creating an initial prototype, they enlisted my help, as the lab's graphic designer, to refine and enhance the website's design.

Audience Students and researchers looking to get started or improve their knowledge of equipment offered by the Interaction Lab.

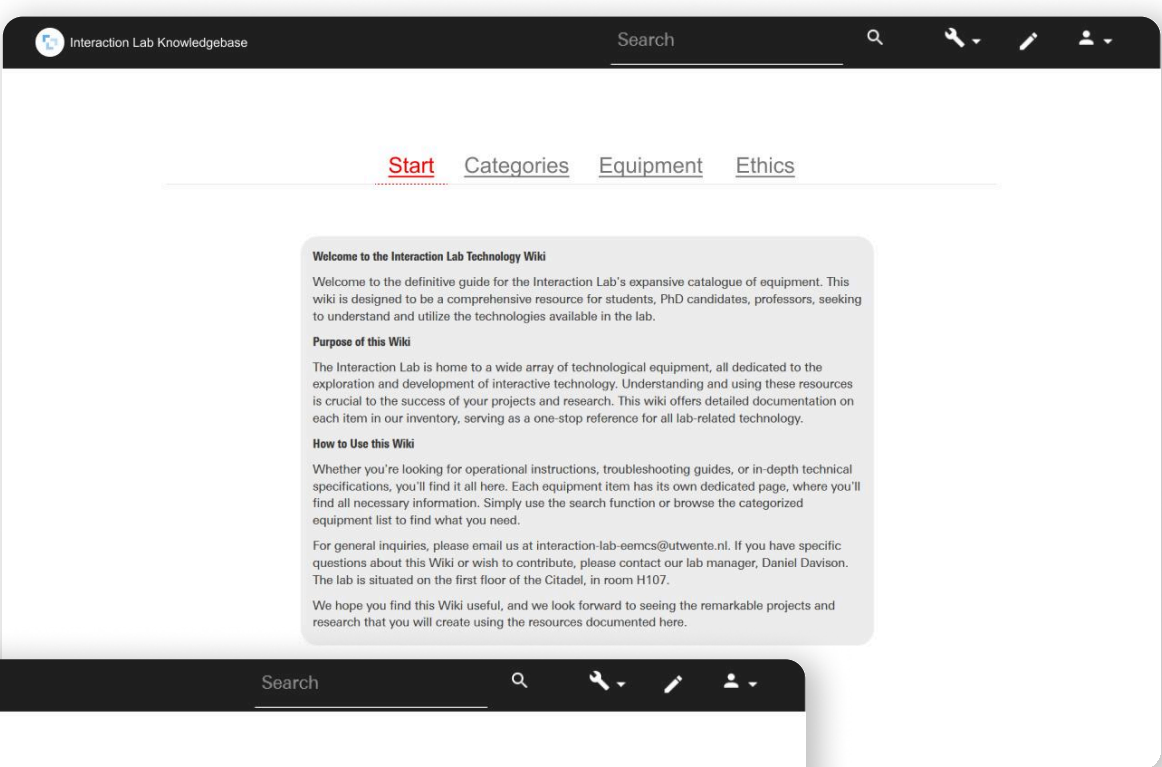

Deliverable A website redesign.

My contribution I designed and iterated on the original prototype in Figma and implemented usability feedback acquired by the user researcher.

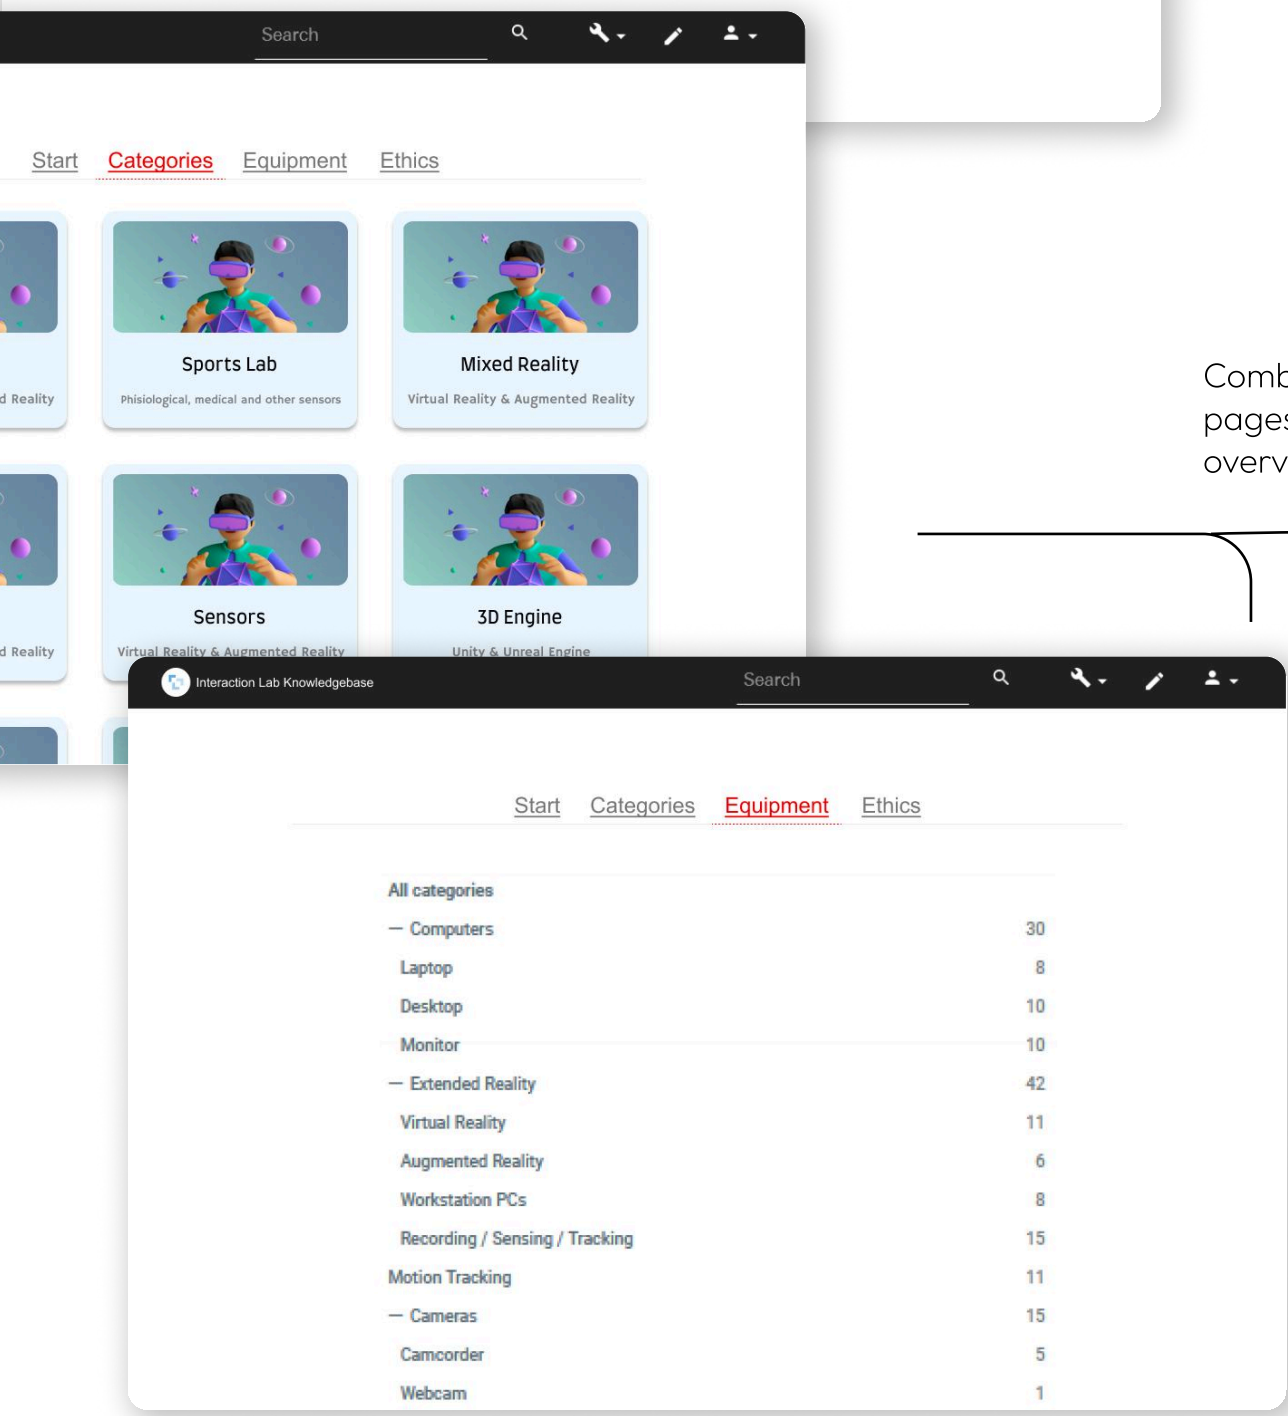

Homepage

The homepage was redesigned consolidating three separate pages—Start, Categories, and Equipment—into a single, streamlined interface. This approach reduced the number of clicks required, ensuring a clear focus on helping visitors quickly and easily locate the documentation they need.

Original

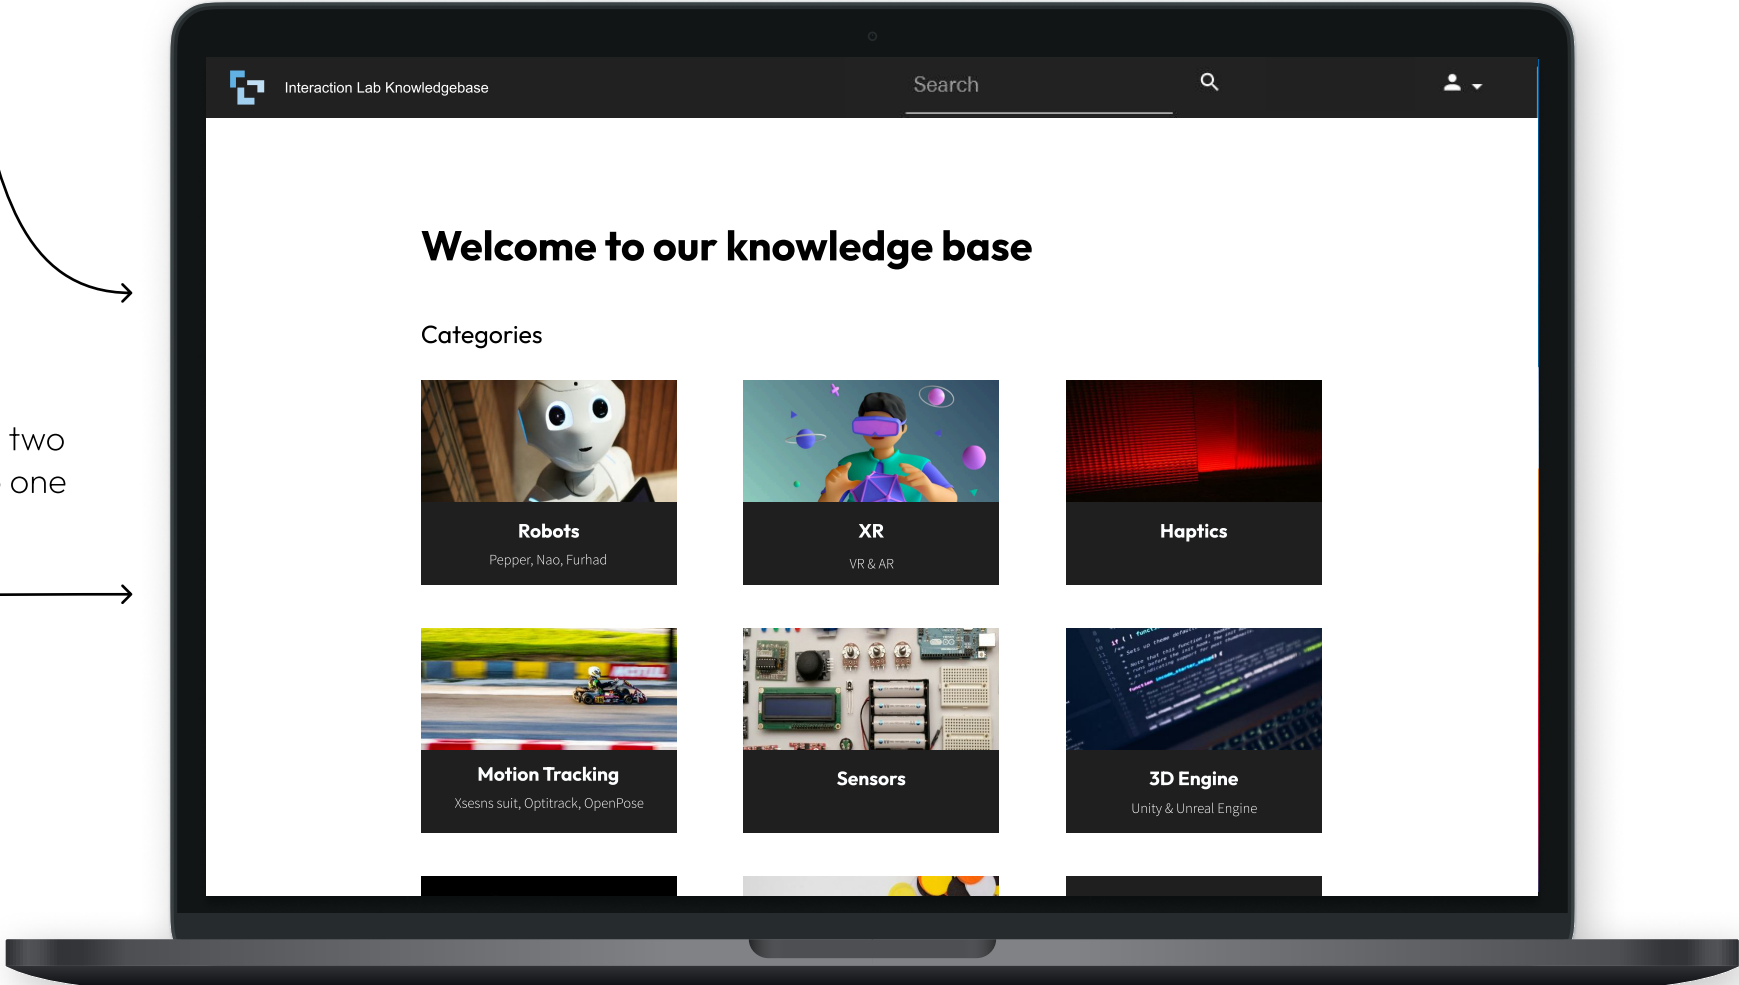

Removed unnecessary text and moved relevant info to bottom of page

Combined two pages into one overview

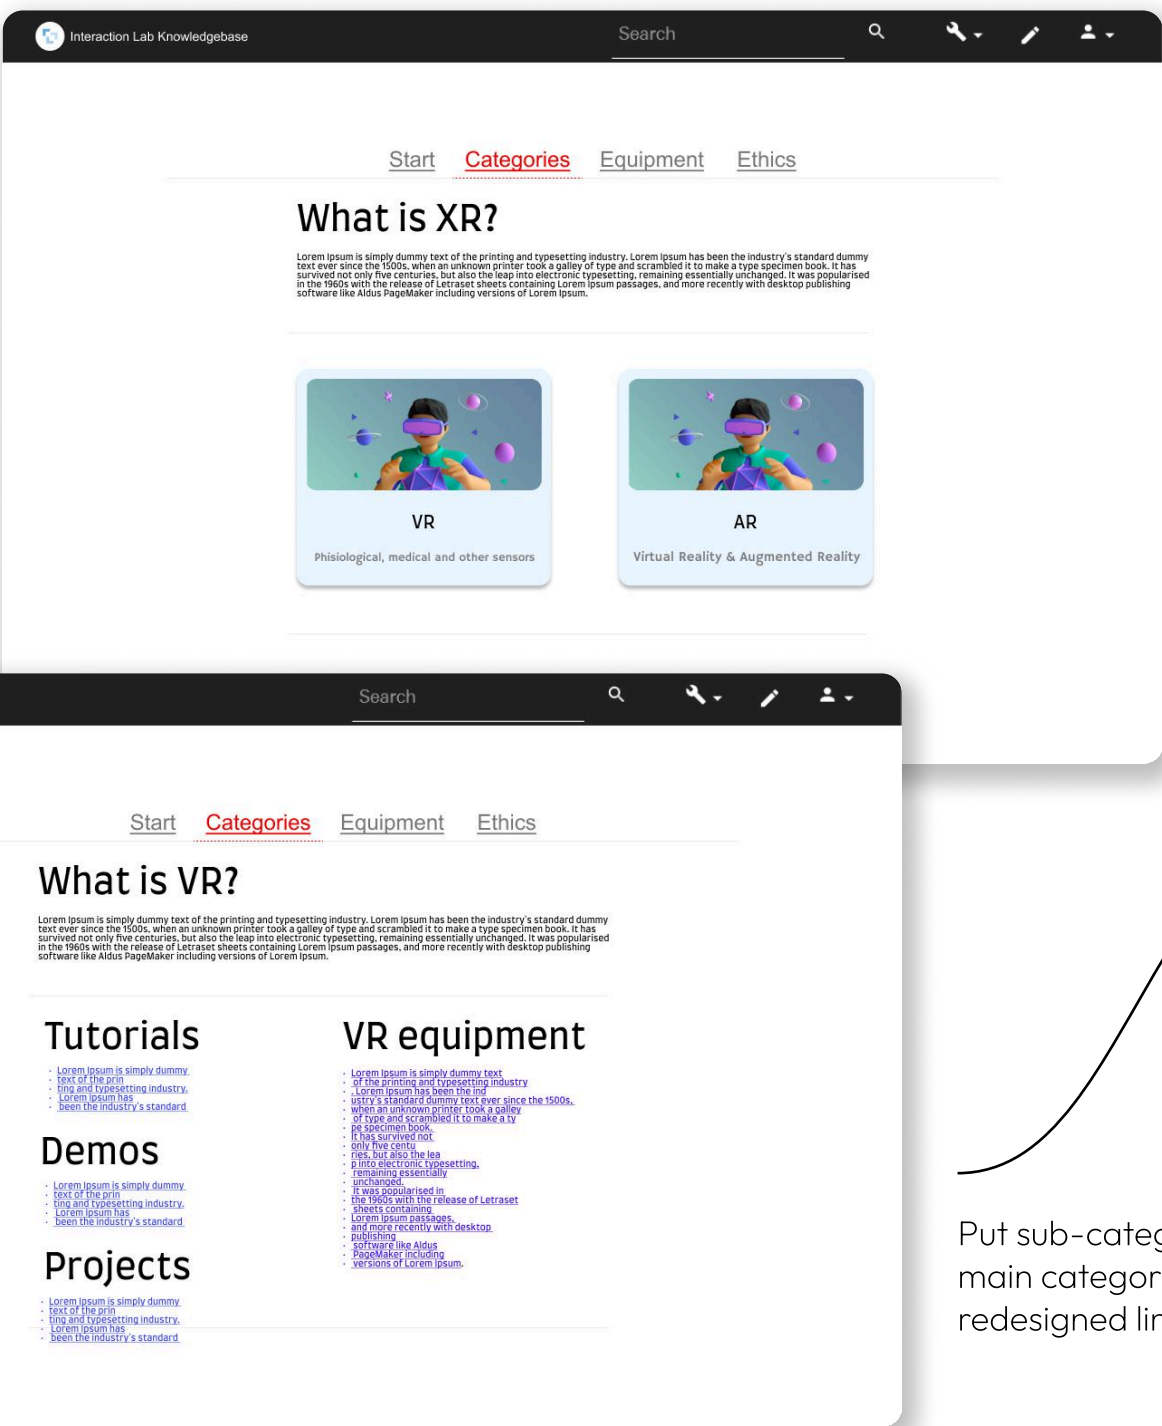

Redesign

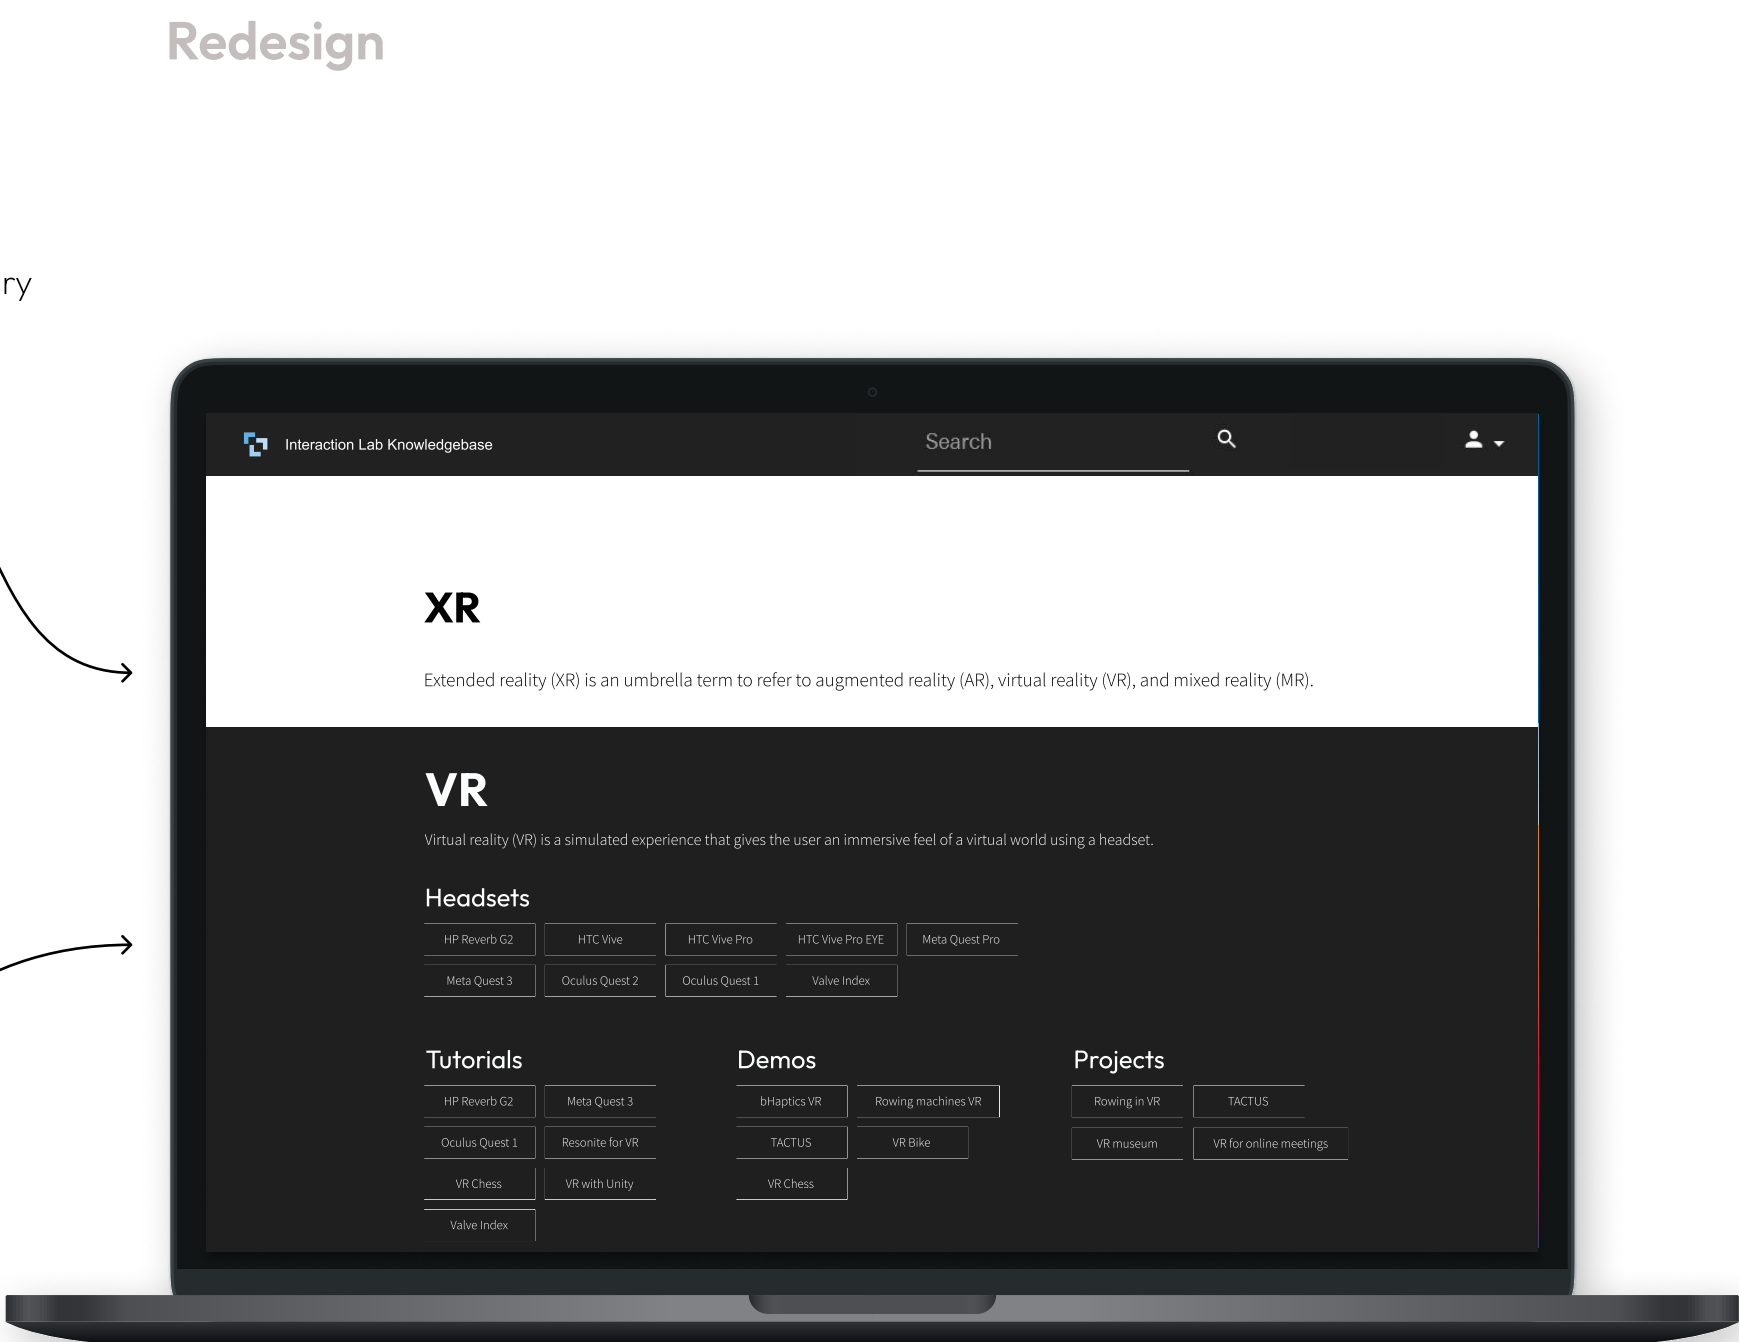

Category page

Category selection was streamlined to display related equipment, tutorials, demos, and projects immediately, eliminating the need to navigate through subcategories. Visual buttons were added to enhance clarity and navigation.

Original

Removed unnecessary text

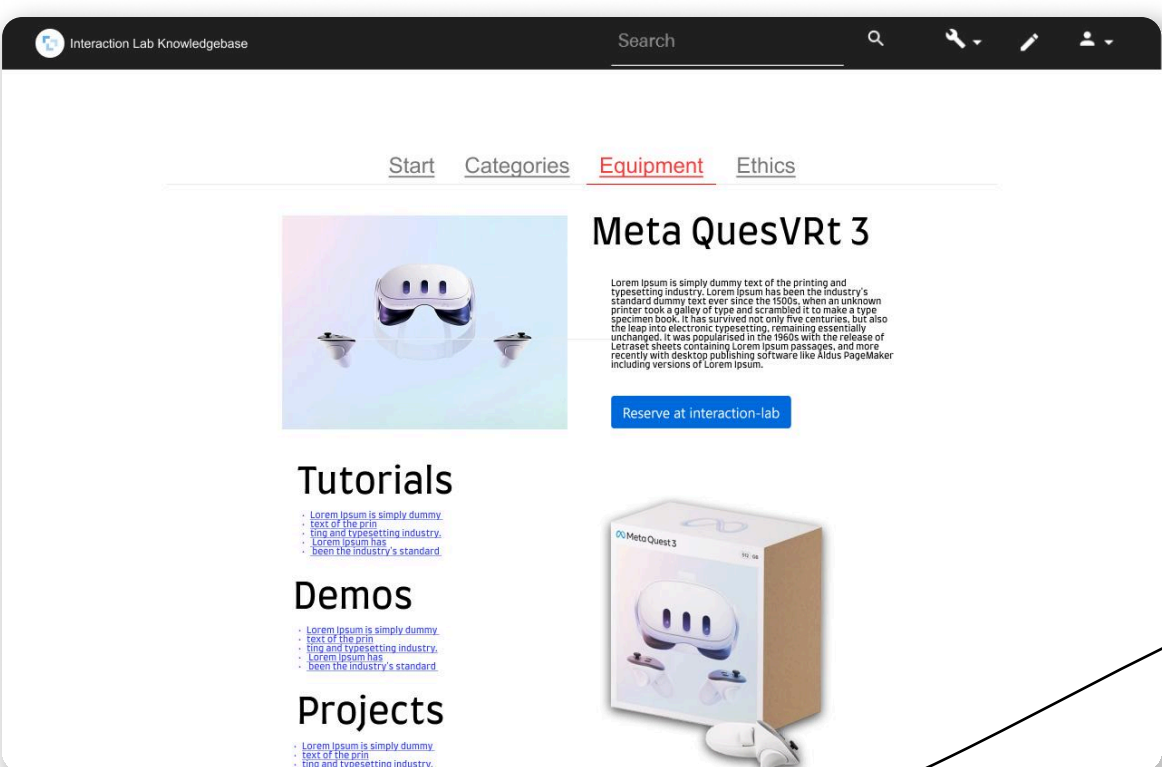

Put sub-categories on the main category page and redesigned links into buttons

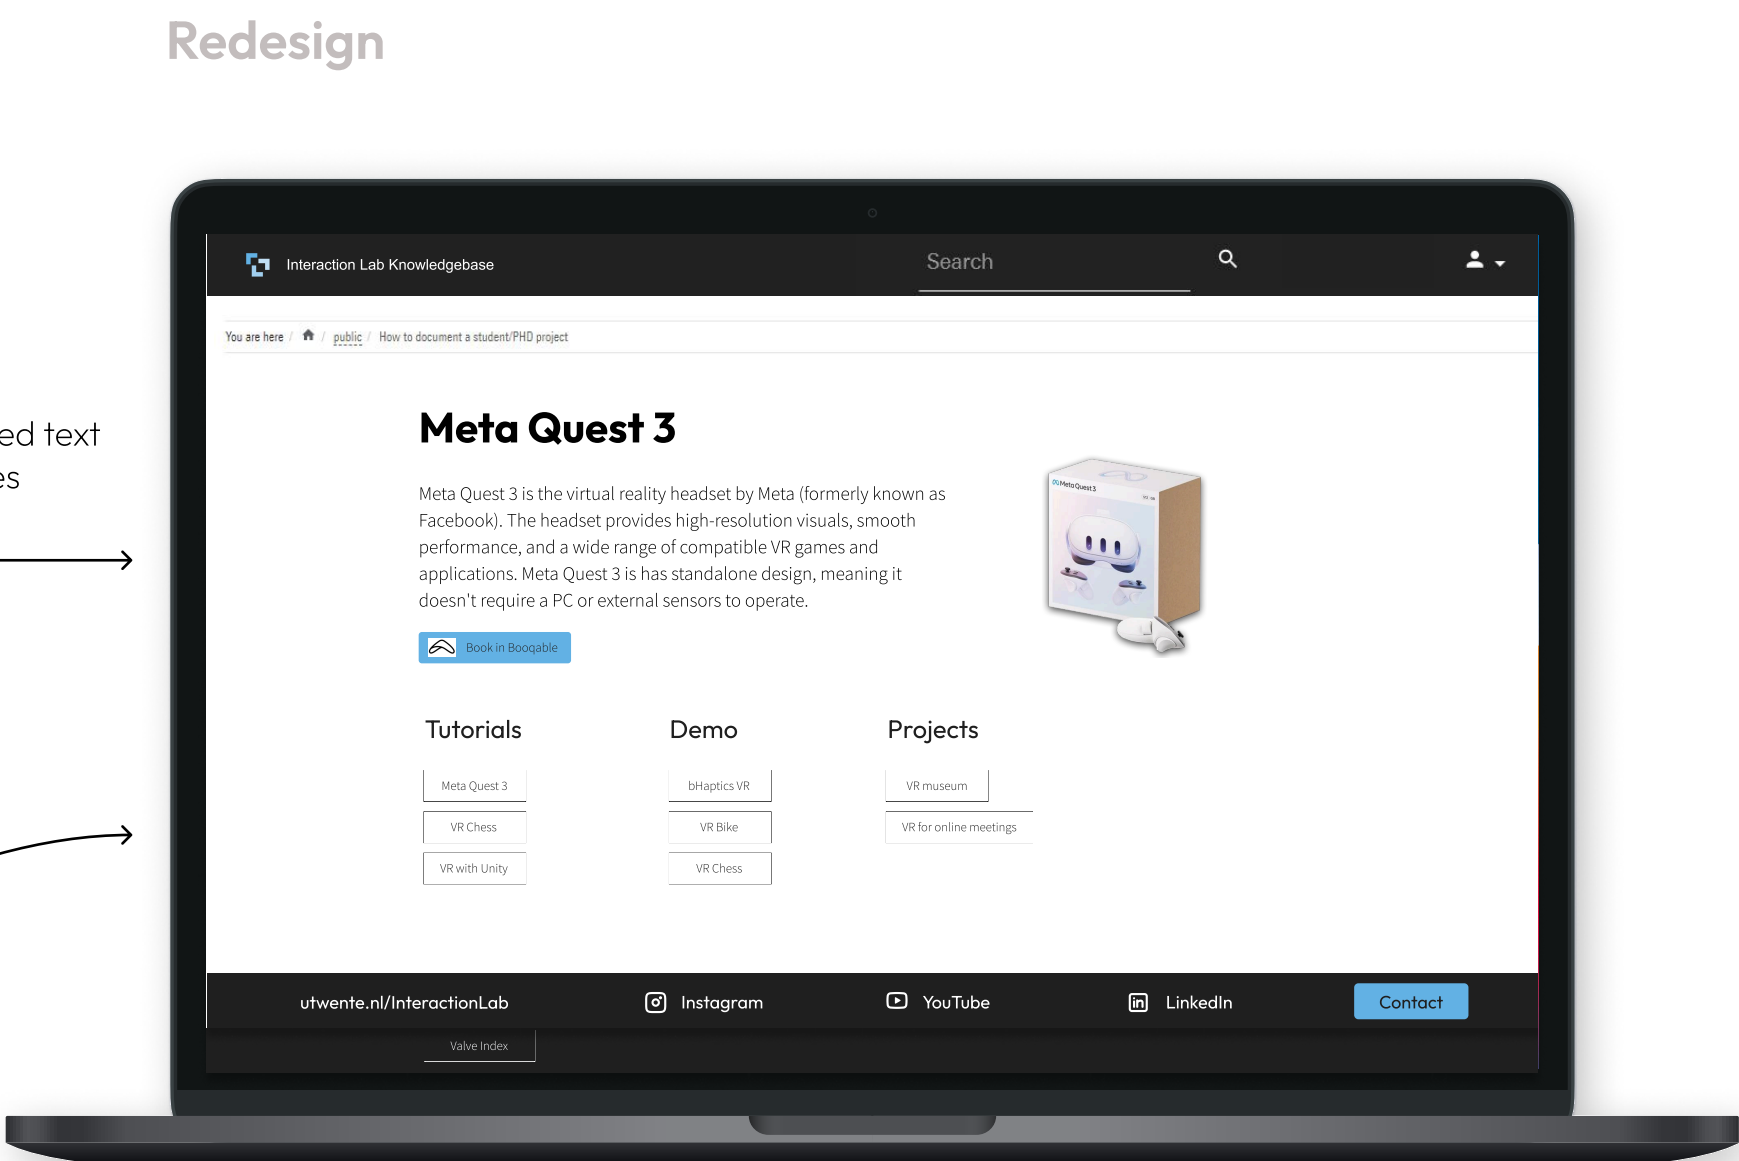

Product page

Equipment pages were restructured and links were replaced by visible buttons for improved usability.

Original

Reorganised text and images

Redesigned links into buttons and distributed them horizontally across the page to reduce scrolling
