

# MusicAll Redesign

|                 |                                                                                                                                                                                                            |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| What is it      | MusicAll is an amateur musical association in Enschede open to anyone interested in performing. For a marketing course, we redesigned their website and analysed its impact using eye-tracking technology. |
| Audience        | People interested in joining a musical group.                                                                                                                                                              |
| Outcome         | The redesign indicated longer gaze time at the header and a better hierarchy of information.                                                                                                               |
| My contribution | I redesigned the website and conducted surveys with participants.                                                                                                                                          |

## Original

The original design suffered from a **lack of focus** due to two key issues: **insufficient visual hierarchy** among the logo, images, and capitalised text and inconsistent typography, with **four different font types** used on a single page.

## Redesign

The following changes were made:

|                |                                                                                                        |
|----------------|--------------------------------------------------------------------------------------------------------|
| Logo           | The logo was made smaller and placed in the corner aligned with the navigation bar.                    |
| Navigation bar | Reduce visual strain with a dark background that blends seamlessly with the image                      |
| Font           | Unified with a single typeface; hierarchy is established using only weight and size variations.        |
| Imagery        | The background image is now full-width with desaturated colours to draw less attention.                |
| News section   | Text and images are left-aligned, with descriptive text visible to encourage scrolling and engagement. |
